Euro 60	60	38	14	140	Square
Euro 70	70	38	16	150	Square

### APPLICATIONS:

Primarily developed for use in metal finishing plants as a G clamp tool.

It is capable of withstanding the corrosive attack of chemicals used within the industry.

### DESCRIPTION:

A tip may be added if required for minimising marking of components and giving extra resistance to slip. It can be supplied in titanium, zirconium or ceramic. As standard the clamping force is provided by a screw with a fine thread. A version with a coarse 'fast' thread for thumb tightening is also available.

Spartan Euro clamps are moulded in glass-filled Noryl for use in anodising; giving a maximum usable temperature of 105°C, or they can be moulded in glass-filled Radel, for use in painting and electro-brightening and at temperatures up to 220°C.
