

Product: Gauge cock

About gauge cocks

A gauge cock is used to isolate a pressure gauge from the pressure medium. Using the gauge cock depressurises the system, to protect against gauge failure or when inspecting, maintaining or recalibrating a line.

Gauge cocks are used in steam boilers and steam systems, compressed air or gas systems, hydraulic systems, chemical and petrochemical plants, in water and wastewater treatment, in the oil and gas industries, by power plants, and in thermal power and boiler systems.

Gauge cocks supplied by CMT Engineering:

- Unpolished brass
- Hard black plastic handle
- Three-way position for locking, discharging and venting
- Maximum working pressure of 16 bar for steam (PN16 pressure rating), therefore generally suitable for low-pressure applications.

Nominal bore: metric	Nominal bore: imperial	Across flats (dimension A)	Length (dimension B)	Overall length (dimension L)	Weight (each)
6mm	1/8"	18mm	18mm	49mm	0.09kg
8mm	1/4"	18mm	18mm	49mm	0.11kg
10mm	3/8"	21mm	21mm	56mm	0.13kg
15mm	1/2"	25mm	25mm	65mm	0.24kg
